

BIG BANK BOSS

NEWS
LETTER
2024

Hyperdrive your Investments (Retirement Account) to Enjoy Earlier

This newsletter is supplied to provide you with technical data on movement for some notable Standard and Poor's S&P 500 stocks. I have added some stocks that are relevant for millennials and meme stocks. This newsletter focuses on Technical Analysis (is used more in the review of short-term investments decisions) and no Fundamental Analysis (is most often used when determining the quality of long-term investments).

It has always been said that you should never try to time the Stock Market, but I am here to say you can do it with some level of certainty. You can never achieve 100% certainty in any decision model, but I provide you with an algorithm model with color trends to help you make optimized manual buy and sell decisions. The main purpose of the charts: (1) direct you to make purchases near the Price Curve lows see Buy Range columns "Green" and (2) sell stocks after a triple digit Year to Date (YTD) run up at the presence of trending color change from "Blue" to "Pink".

Below is a typical price curve with the color trends and rebound percentages. This graphical picture should help you visualize the condensed material in the charts. The data generated for stock and mutual funds charts are captured from the closing price on Friday's and crypto currencies data is captured on Friday's at 7 pm.

The chart below is an informative combination of YTD stock movement, and color indicators to show how the price is trending. A stock will trend "Green" after reaching a threshold value for Rebound Factor (RF) % and may trend "Green" for weeks. To minimize purchasing too early in the trending "Green" it is suggested to be patient and wait for the stock to rebound above dip floor before purchased.

Weekly Newsletters	YTD N-3	YTD N-2	YTD N-1	YTD N	Now Price	Buy Low Price	Buy High Price	Trending Green (wks)	Dip Floor Price	Rebound Factor (RF) %	Now Factor (NF) %	Bounce Factor (BF) %

72% or 81% Dip Floor Indicator
 61% Wait or Hold Indicator
 90% Potential Sell Trigger
 72% or 81% 2nd Dip Floor Indicator
16.34 Now Price is within the Buy Now Price Range
 -13% Now Low-Price Indicator
 -13% 2nd Low-Price Indicator
 N/A No Suggested Buy In Price due to Max Potential < 44%
 XX% Rebound % back to recent high price

Notice that as the price gets closer to the bottom of the dip, the YTD N color repeats being “Yellow” until the bottom is reached and a “White” font appears YTD N-1 to signify the Now Price is on an upswing. I do not tell you when to buy or sell, but you have all the information to make an informed choice amid an unknown future.

The Legion Chart on the previous page should be the most informative tool an active trader has ever had. The condensed format of taking stock curve price data and converting it into YTD Analysis should be a real breakthrough. This process suggests making stock market decisions before the stock market opens and removes the need to monitor the stock market during the day. Remember we are supposed to be working our 9 to 5 job while the stock market is doing its thing growing our investment dollars. Yes, I am providing this useful information tool for free. Below is the explanation of all the columns from left to right.

1. YTD N-2 - this is the Year to Date growth of a stock two weeks in the past.
2. YTD N-1 - this is the Year to Date growth of a stock one week in the past.
3. YTD N - this is the Year to Date growth of a stock right now the week of the published Newsletter.
4. Now Price - is the now price of the stock the week of the published Newsletter.
5. Buy Low Price - this is a fixed price above the Dip Floor Price to allow for price float and minimize false buy triggers. When the Stock Price is above the Buy Low Price and below the Buy High Price, both cells will be “Green” to signify it is a good time to consider making a purchase. You can enter either Low or High Price in your brokerage account as a limit order.
6. Buy High Price - this is a fixed price above the Dip Floor Price to allow for price float above the Buy Low Price. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. When the Stock Price is above the Buy Low Price and below the Buy High Price. These cells will be “Green” to signify it is a good time to consider making a purchase. You can enter this cell value in your brokerage account for a limit order.
7. Trending Green (wks) - This provides you with the number of weeks a particular stock has been between the Buy Price ranges. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. This small Buy Now range could be jumped over because of the data being measured is once every 7-days. Yes, the cell could have N/A in it and not catch anything. This active trader tool is suggestive and is not intended to be an absolute tool. For this reason, you should consider entering the Buy High or Low Price as a Limit Orders in your Brokerage Account.
8. Spike Ratio – this is an indicator of stocks with a hyperbolic gain that typically has an associate quick drop off. If you own a stock that grows to a Spike Ratio of 2, I suggest you sell near the high and take your quick gain. I would suggest that you not purchase the dip of a stock with a Spike Ratio of 2 because a repeat growth back to the previous high is not based on performance but popularity and speculation.
9. Dip Floor Price - the price provided will be one of two prices. One is the lowest price in the range of measured prices. The second is a dip price below the 52-Week High. The second dip price is typically something that can't be measured or suggested by traditional trading tools.
10. Rebound Factor (RF) % - this is exactly what you think it is. This is the ratio of maximum past (June of previous year) to present price divided by the measured range divided by the lowest past (December 31st of previous year) to present price which is called the RF. The RF is then converted to a percentage. This value is always positive.
11. Now Factor (NF) % - This is the positive replacement for the 52-Week Change%. Who cares how much the price has dropped from the high price. This is the wrong thing to measure. This is the ratio of maximum past (June of previous year) to present price divided by the Now Stock Price which is called the NF. The NF is then converted to a percentage. The real thing to measure is the growing Exponential Rebound as the price drops further and further. If a stock has a 52-Week Change% of -50% or -75%, the corresponding Now Potential Rebound 100% or 300%, respectively. You say to yourself, wow. The Now Potential Rebound of 100% or 300% would be a multiple of 2 or 4. If you invested \$32,000 and achieved a multiple of 2 or 4 your investment dollars would be \$64,000 or 128,000, respectively. The growth of the security has a 1 to 1 relationship with total investment made in a company.
12. Bounce Factor (BF) % - the percentage provided can be Zero for two situations. One is when price is at the absolute lowest price for the price range. The second is when price sets lower or a new lower prices. The default calculated percentage when not Zero is the ratio of the Now Stock Price divided by Dip Floor Price which is called the BF. The BF is then converted to a percentage.

Big Bank Boss Triple Point Reference Frame

The discrete measurements of 52-Week High Change % and 52-Week Low Change % are at best an apples and oranges comparison and not entirely useful. For this exact reason, I created the Big Bank Boss Triple equations. The Big Bank Boss Triple equations output are positive numbers. The ratios can easily be converted to percentages. Now you have an apple-to-apple comparison with real-time growth potential. The output results define the now stock price in a triple reference box of the Rebound Factor (RF), Now Factor (NF) and Bounce Factor (BF).

These formulas are very useful whenever the Stock Market goes thru a crisis or market correction. The Bounce Factor (BF) is identical to the 52-Week Low Change which represents the percentage above the Dip Floor Price. The Rebound Factor (RF) defines the maximum potential range for a stock based on past performance. The values of NF and BF in themselves do not provide a holistic picture. It is very important to add in the crucial component of trending upward or downward. If the trend of the price is downward the NF increases and the BF decreases.

There is no way to predict when future stock prices will trend upward, but I provide a weekly Big Bank Boss Newsletter that shows the weekly price trend charts with a "Yellow" cell to indicate a new low indicator and a "White" font cell to indicate a trending up from the Dip Floor Price.

H 5.24 Figure 1. Big Bank Boss Triple Point for RIG as of Jan. 29, 2021

Big Bank Boss Triple Point Equations

These three equations are always positive and make it easy to convert to percentages. Also, a unique thing about these ratios is an equation can be formed to solve for one unknown. This equation can be the building block for a program to monitor stock price movement. The 52-Week Range for RIG is converted below.

$$\begin{aligned} \text{Rebound Factor (RF)} &= (52 - \text{Week High}) / (52 - \text{Week Low}) \\ &= (5.24 / 0.65) = 8.06 \end{aligned}$$

$$\begin{aligned} (\text{RF}) \% &= ((\text{RF}) - 1) \times 100 \\ &= ((8.06) - 1) \times 100 = 706\% \end{aligned}$$

$$\begin{aligned} \text{Now Factor (NF)} &= (52 - \text{Week High}) / (\text{Now Price}) \\ &= (5.24 / 3.36) = 1.56 \end{aligned}$$

$$\begin{aligned} (\text{NF}) \% &= ((\text{NF}) - 1) \times 100 \\ &= ((1.56) - 1) \times 100 = 56\% \end{aligned}$$

$$\begin{aligned} \text{Bounce Factor (BF)} &= (\text{Now Price}) / (52 - \text{Week Low}) \\ &= (3.36 / 0.65) = 5.17 \end{aligned}$$

$$\begin{aligned} (\text{BF}) \% &= ((\text{BF}) - 1) \times 100 \\ &= ((5.17) - 1) \times 100 = 417\% \end{aligned}$$

The three Big Bank Boss Triple Point equations are linked in the single equation shown below. This equation only works for values are ratios, so you can't use this formula when the values are percentages.

$$NF = RF / BF$$

Substitution:

$$RF = 8.06 \text{ and } BF = 5.17$$

$$NF = 8.06 / 5.17 = 1.56$$

Table 1. Potential Stock Picks for January 2024 w/ Year-To-Date (9/1/23 Thru 12/29/23) [Return](#)

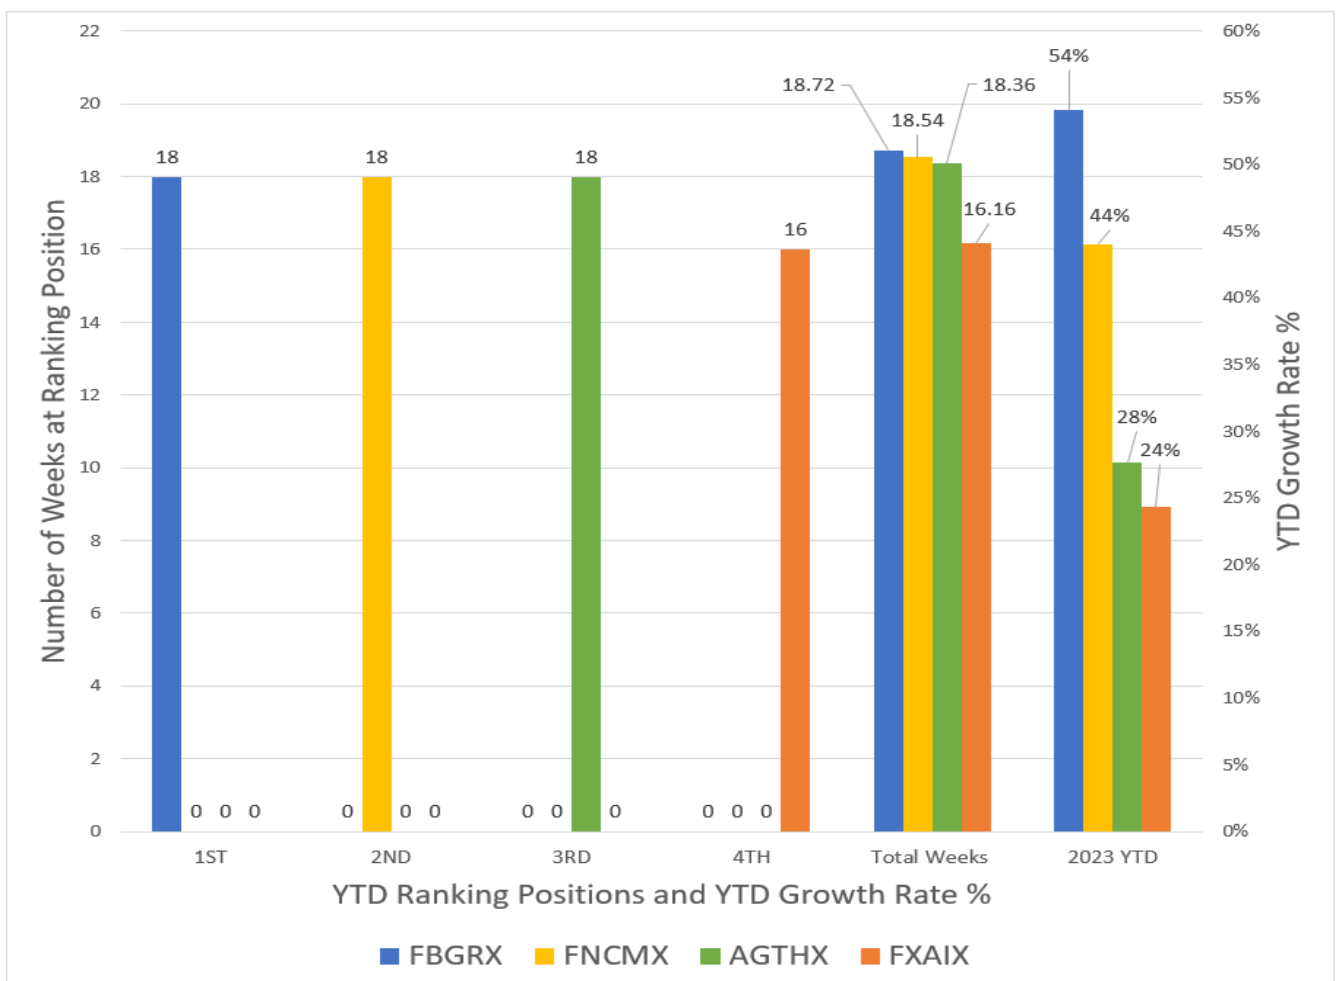

Table 2. Potential Mutual Picks for January 2024 w Year-To-Date (9/1/23 Thru 12/29/23) [Return](#)

The last three months of securities movement from 2023 provides the best suggested 2024 potential picks to accelerate the growth of your investment account. There is no guarantee that the Year-to-Date growth of the suggested securities will have the same growth rate from year to year or that it will be positive annually. I did not provide any suggested picks for cryptocurrencies because there is no correlation between past 2023 movement and 2024 growth rates.

The Hyper Growth Strategy has built in 10% to 18% price float triggers above the Dip Floor Price to keep the cell "Green". It is very unrealistic to say that you can always make a purchase at the absolute bottom of a price curve and sell at the peak of the price curve. With my technical analysis approach, I am able assist you to be an informed active trader with an optimized purchase window for stocks throughout the year. If you already own a stock, you can average down into the stock at the Dip Floor Price.

The results in the Table 5 and Table 6 were created with the same algorithm for the stocks. I have included the Top 14 Popular Cryptocurrencies for you to observe the movement every week. There is no true forcing function to explain the upward or downward movement of the cryptocurrencies. Also, there is no explanation why one cryptocurrency grows faster than another. The graphs are primarily provided to be a snapshot of the magnitude of the growth at ~7pm on Friday and the Dip analysis range starts on Dec. 31, 2023. Since the Crypto Exchanges are operational 24 hours a day, the actual price could be dramatically different by the ringing of the Monday morning bell.

The results in the Table 7 and Table 8 were created with the same algorithm as the other securities. I have included 20 Mutual Funds for my weekly analysis from the list of 100 listed in an article ([click here](#)). You should quickly notice that mutual funds are not as volatile as stocks and cryptocurrencies. As of January 5, 2024, the Dow Jones, NASDAQ and S&P 500 saw their largest dip since the beginning of the 2024. On the flip side notice that Now Factor (NF) % is significantly lower for Mutual Funds than Stocks.

Table 7. Highest Bubble Up Performing Mutual Fund (as of 5-24-24)

Purchase or Not Purchase [Return](#)

Before you decide to purchase, you must assure yourself that you are purchasing a stock that is popular now, services or product is in great demand, beating up on the little guys in the same business, and they set the industry standard in their business area. This company attributes can be confirmed by customer growth, new acquisitions to grow business, increasing quarterly profit and you hear positive news related to their business. It is suggested to make purchases in a dip in the price trend to increase the overall YTD performance.

It is suggested that you make multiple investments in the companies you own throughout the year. This strategy will help you own a better yearly average ownership that will ultimately improve your growth rate of return.

The Real Artificial Intelligence (AI) stock darling since the boom isn't Nvidia – Bank of America

Carla Mozee wrote this article for Seeking Alpha on Tuesday, May 21, 2024.

Nvidia (NASDAQ: NVDA) has been thrust on center stage of the AI investing trend, but shares of Vertiv (VRT), a data centers equipment manufacturer, have outstripped the chipmaker's blockbuster stock performance over the past year.

Bank of America (BofA) highlighted Vertiv's (VRT) outperformance of Nvidia (NVDA) shares by roughly 300 percentage points since the graphics processing units maker released its blowout Q1 results on May 24, 2023 in late trading.

"AI investment isn't just about GPUs, but also power," Ohsung Kwon, equity & quant strategist at BofA Securities, said in a Monday note. "GPUs need 2-2.5x more power than CPUs, and expected power usage for US data centers under construction is equivalent to more than 50% of the power currently used by US data centers."

This is where Vertiv (VRT), an Ohio-based manufacturer of power and cooling equipment for data centers, comes in. Kwon said power used by AI applications is expected to grow at a 25%-33% compound annual growth rate over the next few years.

Vertiv (VRT) shares have rocketed 511% since May 24, 2023, when Nvidia (NVDA) in late trading smashed Wall Street's Q1 targets and offered guidance that zoomed past expectations. Nvidia (NVDA) shares have jumped ~210% since then through Monday's close. Nvidia (NVDA) over the past year has risen beyond a \$2 trillion market capitalization.

Nvidia on Wednesday, May 2nd is expected to report Q1 revenue of \$24.6 billion and EPS of \$5.53. Data center revenue is forecast to have more than tripled from a year ago to \$20.97 billion.

Overall comments for the week [Return](#)

The count for trending "Green" for the securities were stocks (20 out of 68), cryptocurrencies (3 out of 14), and mutual funds (2 out of 20).

The Weekly Winners were NVIDIA Corp – Computer Chips (NVDA), Coinbase – Crypto Exchange (COIN), AMC Entertainment Holdings, Inc. (AMC-meme), Vertiv Holdings – Data Centers Equipment (VRT), and Lam Research – Semiconductor (LRCX) with gains of 15%, 14%, 10%, 10%, and 6%, respectively.

The Weekly Losers were Virgin Galactic – Space Travel (SPCE-add), GameStop (GME-meme), Canoo Inc. – Electric Auto Maker (GOEV), Alibaba Online (BABA), and Intuit Inc. – Software (INTU) with losses of -15%, -14%, -12%, -8%, and -8%, respectively.

I continue to recommend that you do not purchase stocks within days before the quarterly report is posted. It is best to let the market absorb the news good or bad news. If the price drops, you get to purchase the stock at a discount instead of getting hit with an instant -20% loss or greater that will take weeks or months or a year to get back to even.
