12-31-23

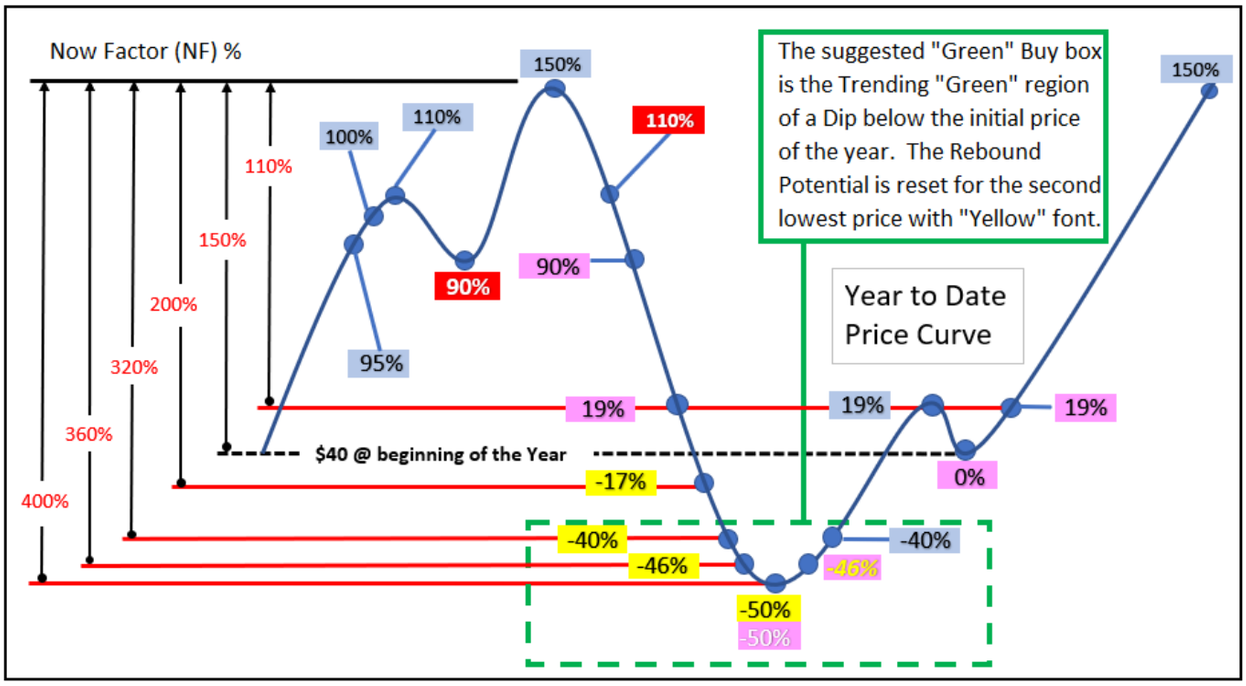
BIG BANK BOSS NEWS LETTER 2023

Hyperdrive your Investments (Retirement Account) to Enjoy Earlier

This newsletter is supplied to provide you with technical data on movement for some notable Standard and Poor's S&P 500 stocks. I have added some stocks that are relevant for millennials and meme stocks. This newsletter focuses on Technical Analysis (is used more in the review of short-term investments decisions) and no Fundamental Analysis (is most often used when determining the quality of long-term investments).

It has always been said that you should never try to time the Stock Market, but I am here to say you can do it with some level of certainty. You can never achieve 100% certainty in any decision model, but I provide you with an algorithm model with color trends to help you make optimized manual buy and sell decisions. The main purpose of the charts: (1) direct you to make purchases near the Price Curve lows see Buy Range columns "Green" and (2) sell stocks after a triple digit Year to Date (YTD) run up at the presence of trending color change from "Blue" to "Pink".

Below is a typical price curve with the color trends and rebound percentages. This graphical picture should help you visualize the condensed material in the charts. The data generated for stock and mutual funds charts are captured from the closing price on Friday's and crypto currencies data is captured on Friday's at 7 pm.



The chart below is an informative combination of YTD stock movement, and color indicators to show how the price is trending. A stock will trend "Green" after reaching a threshold value for Rebound Factor (RF) % and may trend "Green" for weeks. To minimize purchasing too early in the trending "Green" it is suggested to be patient and wait for the stock to rebound above dip floor before purchased.

Weekly Newsletters	YTD N-3	YTD N-2	YTD N-1	YTD N	Now Price	Buy Low Price	Buy High Price	Trending Green (wks)	Dip Floor Price	Rebound Factor (RF) %	Now Factor (NF) %	Bounce Factor (BF) %
Week 1	95%	100%	110%	90%	76.00	41.88	47.50	N/A	40.00	110%	11%	90%

Week 14	-40%	19%	0%	19%	47.60	22.76	26.17	1	21.74	360%	110%	119%
Week 15	19%	0%	19%	150%	100.00	22.76	26.17	1	21.74	360%	0%	360%

72% or 81% Dip Floor Indicator | 61% or 19% Wait or Hold Indicator | 90% Potential Sell Trigger | 72% or 81% 2nd Dip Floor Indicator

16.34 Now Price is within the Buy Now Price Range | -13% Now Low-Price Indicator | -13% 2nd Low-Price Indicator | N/A No Suggested Buy In Price due to Max Potential < 44% | XX% Rebound % back to recent high price

Notice that as the price gets closer to the bottom of the dip, the YTD N color repeats being “Yellow” until the bottom is reached and a “White” font appears YTD N-1 to signify the Now Price is on an upswing. I do not tell you when to buy or sell, but you have all the information to make an informed choice amid an unknown future.

The Legion Chart on the previous page should be the most informative tool an active trader has ever had. The condensed format of taking stock curve price data and converting it into YTD Analysis should be a real breakthrough. This process suggests making stock market decisions before the stock market opens and removes the need to monitor the stock market during the day. Remember we are supposed to be working our 9 to 5 job while the stock market is doing its thing growing our investment dollars. Yes, I am providing this useful information tool for free. Below is the explanation of all the columns from left to right.

1. YTD N-2 - this is the Year to Date growth of a stock two weeks in the past.
2. YTD N-1 - this is the Year to Date growth of a stock one week in the past.
3. YTD N - this is the Year to Date growth of a stock right now the week of the published Newsletter.
4. Now Price - is the now price of the stock the week of the published Newsletter.
5. Buy Low Price - this is a fixed price above the Dip Floor Price to allow for price float and minimize false buy triggers. When the Stock Price is above the Buy Low Price and below the Buy High Price, both cells will be “Green” to signify it is a good time to consider making a purchase. You can enter either Low or High Price in your brokerage account as a limit order.
6. Buy High Price - this is a fixed price above the Dip Floor Price to allow for price float above the Buy Low Price. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. When the Stock Price is above the Buy Low Price and below the Buy High Price. These cells will be “Green” to signify it is a good time to consider making a purchase. You can enter this cell value in your brokerage account for a limit order.
7. Trending Green (wks) - This provides you with the number of weeks a particular stock has been between the Buy Price ranges. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. This small Buy Now range could be jumped over because of the data being measured is once every 7-days. Yes, the cell could have N/A in it and not catch anything. This active trader tool is suggestive and is not intended to be an absolute tool. For this reason, you should consider entering the Buy High or Low Price as a Limit Orders in your Brokerage Account.
8. Spike Ratio – this is an indicator of stocks with a hyperbolic gain that typically has an associate quick drop off. If you own a stock that grows to a Spike Ratio of 2, I suggest you sell near the high and take your quick gain. I would suggest that you not purchase the dip of a stock with a Spike Ratio of 2 because a repeat growth back to the previous high is not based on performance but popularity and speculation.
9. Dip Floor Price - the price provided will be one of two prices. One is the lowest price in the range of measured prices. The second is a dip price below the 52-Week High. The second dip price is typically something that can’t be measured or suggested by traditional trading tools.
10. Rebound Factor (RF) % - this is exactly what you think it is. This is the ratio of maximum past (June of previous year) to present price divided by the measured range divided by the lowest past (December 31st of previous year) to present price which is called the RF. The RF is then converted to a percentage. This value is always positive.
11. Now Factor (NF) % - This is the positive replacement for the 52-Week Change%. Who cares how much the price has dropped from the high price. This is the wrong thing to measure. This is the ratio of maximum past (June of previous year) to present price divided by the Now Stock Price which is called the NF. The NF is then converted to a percentage. The real thing to measure is the growing Exponential Rebound as the price drops further and further. If a stock has a 52-Week Change% of -50% or -75%, the corresponding Now Potential Rebound 100% or 300%, respectively. You say to yourself, wow. The Now Potential Rebound of 100% or 300% would be a multiple of 2 or 4, respectively. If you invested $32,000 and achieved a multiple of 2 or 4 your investment dollars would be $64,000 or 128,000, respectively. The growth of the security has a 1 to 1 relationship with total investment made in a company.
12. Bounce Factor (BF) % - the percentage growth calculated will be Zero for two situations. One is when price is at the absolute lowest price for the price range. The second is when price sets lower or a new lower prices. The default calculated percentage when not Zero is the ratio of the Now Stock Price divided by Dip Floor Price which is called the BF. The BF is then converted to a percentage.

Big Bank Boss Triple Point Reference Frame

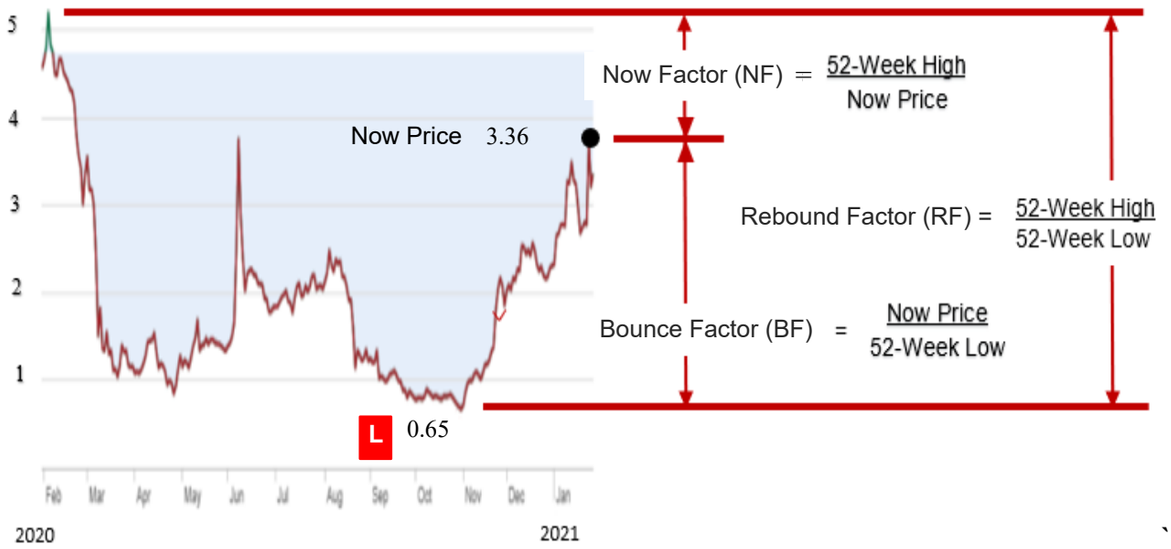
The discrete measurements of 52-Week High Change % and 52-Week Low Change % are at best an apples and oranges comparison and not entirely useful. For this exact reason, I created the Big Bank Boss Triple equations. The Big Bank Boss Triple equations output are positive numbers. The ratios can easily be converted to percentages. Now you have an apple-to-apple comparison with real-time growth potential. The output results define the now stock price in a triple reference box of the Rebound Factor (RF), Now Factor (NF) and Bounce Factor (BF).

These formulas are very useful whenever the Stock Market goes thru a crisis or market correction. The Bounce Factor (BF) is identical to the 52-Week Low Change which represents the percentage above the Dip Floor Price. The Rebound Factor (RF) defines the maximum potential range for a stock based on past performance. The values of NF and BF in themselves do not provide a holistic picture. It is very important to add in the crucial component of trending upward or downward. If the trend of the price is downward the NF increases and the BF decreases.

There is no way to predict when future stock prices will trend upward, but I provide a weekly Big Bank Boss Newsletter that shows the weekly price trend charts with a "Yellow" cell to indicate a new low indicator and a "White" font cell to indicate a trending up from the Dip Floor Price.

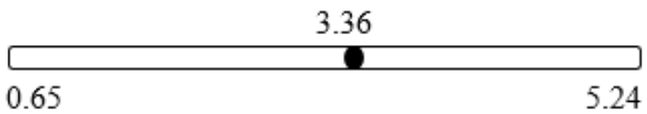
H 5.24

Figure 1. Big Bank Boss Triple Point for RIG as of Jan. 29, 2021



Big Bank Boss Triple Point Equations

These three equations are always positive and make it easy to convert to percentages. Also, a unique thing about these ratios is an equation can be formed to solve for one unknown. This equation can be the building block for a program to monitor stock price movement. The 52-Week Range for RIG is converted below.



$$\text{Rebound Factor (RF)} = (52-\text{Week High})/(52-\text{Week Low}) = (5.24/0.65) = 8.06$$

$$(\text{RF})\,\% = \big((RF)-1\big)\,X\,100 = \big((8.06)-1\big)\,X\,100 = 706\%$$

$$\text{Now Factor (NF)} = (52-Week\ High)/(Now\ Price) = (5.24/3.36) = 1.56$$

$$(\text{NF})\,\% = \big((NF)-1\big)\,X\,100 = \big((1.56)-1\big)\,X\,100 = 56\%$$

$$\text{Bounce Factor (BF)} = (Now\ Price)/(52-Week\ Low) = (3.36/0.65) = 5.17$$

$$(\text{BF})\,\% = \big((BF)-1\big)\,X\,100 = \big((5.17)-1\big)\,X\,100 = 417\%$$

The three Big Bank Boss Triple Point equations are linked in the single equation shown below. This equation only works for number values and not percentages.

$$NF = RF/BF$$

Substitution:

RF = 8.06 and BF = 5.17

NF = 8.06 / 5.17 = 1.56

Stocks	15	ANET	Arista Networks - Computer Hardware	94%	$19,407
Stocks	16	SDGR	Health (Schrodinger Inc.) (IPO 02-06-20)	89%	$18,932
Stocks	17	LRCX	Semiconductor (Lam Research)	86%	$18,636
Stocks	18	NOW	Software - ServiceNow (S&P 500 - 11-21-19)	82%	$18,196
Stocks	19	AMZN	Internet Retail (Amazon) (20:1-2022)	81%	$18,088
Stocks	20	ADBE	Software (Abobe)	77%	$17,728
Crypto	1	LINK	Chainlink	184%	$28,373
Crypto	2	BCH	Bitcoin Cash	163%	$26,272
Crypto	3	BTC	Bitcoin	154%	$25,393
Mutual	1	FBGRX	Fidelity Blue Chip (Lrg-Grth)	54%	$15,407
Mutual	2	FNCMX	Fidelity (Mirrors the NASDAQ)	44%	$14,405
Mutual	3	AGTHX	American Funds (Lrg-Grth)	28%	$12,762
Index	1	^DJI	Dow Jones	14%	$11,370
Index	2	^IXIC	NASDAQ	43%	$14,342
Index	3	^GSPC	S&P 500	24%	$12,423

The highest YTD performance for Mutual Funds was 54%. This is an exceptional growth rate, but the highest YTD performance for Cryptocurrencies and Stocks were significantly higher at 184% and 391%, respectively. If a constant rate of return of the Mutual Fund was assumed to be 54%, it would take 1.5 years to double your investment dollars.

16.34 Now Price is within the Buy Now Price Range | -13% Now Low-Price Indicator | -13% 2nd Low-Price Indicator | N/A No Suggested Buy In Price due to Max Potential < 44% | XX% Rebound % back to recent high price

The Hyper Growth Strategy has a built in float triggers above the Dip Floor Price to keep the cell “Green”. It is very unrealistic to say that you can always make a purchase at the absolute bottom of a price curve and sell at the peak of the price cure. With my technical analysis approach, I am able assist you to be an informed active trader with an optimized purchase window for stocks throughout the year. If you already own a stock, you can average down into the stock at the Dip Floor Price.

The results in the Table 13 and Table 14 were created with the same algorithm for the stocks. I have included the Top 14 Popular Cryptocurrencies for you to observe the movement every week. There is no true forcing function to explain the upward or downward movement of the cryptocurrencies. Also, there is no explanation why one cryptocurrency grows faster than another. The graphs are primarily provided to be a snapshot of the magnitude of the growth at ~7pm on Friday and the Crypto Dip analysis range started on October 13, 2023. Since the Crypto Exchanges are operational 24 hours a day, the actual price could be dramatically different by the ringing of the Monday morning bell.

The results in the Table 15 and Table 16 were created with the same algorithm as the other securities. I have included 20 Mutual Funds for my weekly analysis from the list of 100 listed in an article (click here). You should quickly notice that mutual funds are not as volatile as stocks and cryptocurrencies. The Dow Jones, NASDAQ and S&P 500 saw their largest dip on Mar. 10, 2023, Dec. 30, 2022, and Dec. 30, 2022, respectively.

Purchase or Not Purchase Return

Before you decide to purchase, you must assure yourself that you are purchasing a stock that is popular now, services or product is in great demand, beating up on the little guys in the same business, and they set the industry standard in their business area. This company attributes can be confirmed by customer growth, new acquisitions to grow business, increasing quarterly profit and you hear positive news related to their business. It is suggested to make purchases in a dip in the price trend to increase the overall YTD performance.

It is suggested that you make multiple investments in the companies you own throughout the year. This strategy will help you own a better yearly average ownership that will ultimately improve your growth rate of return.

Tech stocks just wrapped up one of their best years in past two decades after 2022 slum

Ari Levy and Jordan Novet wrote this article for CNBC on Friday, December 29, 2023.

Key Points

- The Nasdaq climbed 43% in 2023, one of its best performances in two decades.
- Similar to the rallies in 2009 and 2003, the Nasdaq was coming off a brutal year for investors.
- This year's bounceback was led by huge gains in chipmaker Nvidia and Facebook parent Meta.

Tech stocks rebounded from a disastrous 2022 and lifted the Nasdaq to one of its strongest years in the past two decades.

After last year's 33% plunge, the tech-heavy Nasdaq finished 2023 up 43%, its best year since 2020, which was narrowly higher. The gain was also just shy of the index's performance in 2009. Those are the only two years with bigger gains dating back to 2003, when stocks were coming out of the dot-com crash.

The Nasdaq is now just 6.5% below its record high it reached in November 2021.

Across the industry, the big story this year was a return to risk, driven by the Federal Reserve halting its interest rate hikes and a more stable outlook on inflation. Companies also benefited from the cost-cutting measures they put in place starting late last year to focus on efficiency and bolstering profit margins.

"Once you have a Fed that's backing off, no mas, in terms of rate hikes, you can get back to the business of pricing companies properly — how much money do they make, what kind of multiple do you put on it," Kevin Simpson, founder of Capital Wealth Planning, told CNBC's "Halftime Report" on Tuesday. "It can continue into 2024."

While the tech industry got a big boost from the macro environment and the prospect of lower borrowing costs, the emergence of generative artificial intelligence drove excitement in the sector and pushed companies to invest in what's viewed as the next big thing.

Nvidia was the big winner in the AI rush. The chipmaker's stock price soared 239% in 2023, as large cloud vendors and heavily funded startups snapped up the company's graphics processing units (GPUs), which are needed to train and run advanced AI models. In the first three quarters of 2023, Nvidia generated $17.5 billion in net income, up more than sixfold from the prior year. Revenue in the latest quarter tripled.

Overall comments for the week Return

The count for trending "Green" for the securities were stocks (1 out of 63), cryptocurrencies (0 out of 14), and mutual funds (0 out of 20).

The Weekly Winners were Canoo Inc. – Electric Auto Maker (GOEV), Koss – Electronics (KOSS), Zoom Information – Software (ZI), Tesla – Electric Auto Maker (TSLA), Micron – Semiconductor (MU), and Mastercard – Credit Services (MA) Moderna – COVID-19 (MRNA), with gains of 8.3%, 5.6%, 5.1%, 5%, and 3.3%, respectively.

The Weekly Losers were Koss – Electronics (KOSS-meme), Virgin Galactic – Space Travel (SPCE-add), Fiverr - Talk in Israel (FVRR), Lyft – Ride Share (LYFT), and Expedia Group – Travel Service (EXPE) with losses of -10%, -5.8%, -4%, -2.3%, and -2.3%, respectively.

I continue to recommend that you do not purchase stocks within days before the quarterly report is posted. It is best to let the market absorb the news good or bad news. If the price drops, you get to purchase the stock at a discount instead of getting hit with an instant -20% loss or greater that will take weeks or months or a year to get back to even.
