# **BIG BANK BOSS**

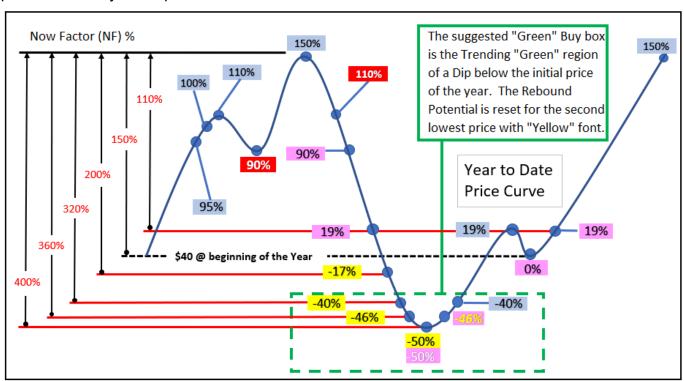

**NEWS** LETTER 2025

## Hyperdrive your Investments (Retirement Account) to Enjoy Earlier

This newsletter is supplied to provide you with technical data on movement for some notable Standard and Poor's S&P 500 stocks. I have added some stocks that are relevant for millennials and meme stocks. This newsletter focuses on Technical Analysis (is used more in the review of shortterm investments decisions) and no Fundamental Analysis (is most often used when determining the quality of long-term investments).

It has always been said that you should never try to time the Stock Market, but I am here to say you can do it with some level of certainty. You can never achieve 100% certainty in any decision model, but I provide you with an algorithm model with color trends to help you make optimized manual buy and sell decisions. The main purpose of the charts: (1) direct you to make purchases near the Price Curve lows see Buy Range columns "Green" and (2) sell stocks after a triple digit Year to Date (YTD) run up at the presence of trending color change from "Blue" to "Pink".

Below is a typical price curve with the color trends and rebound percentages. This graphical picture should help you visualize the condensed material in the charts. The data generated for stock and mutual funds charts are captured from the closing price on Friday's and crypto currencies data is captured on Friday's at 7 pm.

The chart below is an informative combination of YTD stock movement, and color indicators to show how the price is trending. A stock will trend "Green" after reaching a threshold value for Rebound Factor (RF) % and may trend "Green" for weeks. To minimize purchasing too early in the trending "Green" it is suggested to be patient and wait for the stock to rebound above dip floor before purchased.

Weekly	YTD	YTD	YTD	YTD	Now	Buy Low	Buy High	Trending Green	Dip Floor	Rebound Factor	Now Factor	Bounce Factor
Newsletters	N-3	N-2	N-1	N	Price	Price	Price	(wks)	Price	(RF) %	(NF) %	(BF) %
Week 1	95%	100%	110%	90%	76.00	41.88	47.50	N/A	40.00	110%	11%	90%

Indicator

due to Max Potential < 44%

Indicator

Buy Now Price Range

recent high price

Notice that as the price gets closer to the bottom of the dip, the YTD N color repeats being "Yellow" until the bottom is reached and a "White" font appears YTD N-1 to signify the Now Price is on an upswing. I do not tell you when to buy or sell, but you have all the information to make an informed choice amid an unknown future.

The Legion Chart on the previous page should be the most informative tool an active trader has ever had. The condensed format of taking stock curve price data and converting it into YTD Analysis should be a real breakthrough. This process suggests making stock market decisions before the stock market opens and removes the need to monitor the stock market during the day. Remember we are supposed to be working our 9 to 5 job while the stock market is doing its thing growing our investment dollars. Yes, I am providing this useful information tool for free. Below is the explanation of all the columns from left to right.

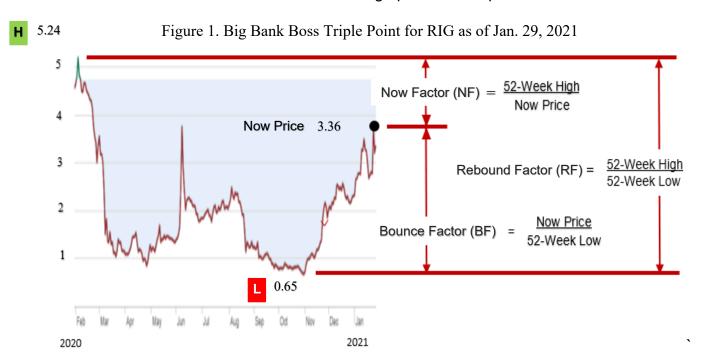

- 1. YTD N-2 this is the Year to Date growth of a stock two weeks in the past.
- 2. YTD N-1 this is the Year to Date growth of a stock one week in the past.
- 3. YTD N this is the Year to Date growth of a stock right now the week of the published Newsletter.
- 4. Now Price is the now price of the stock the week of the published Newsletter.
- 5. Buy Low Price this is a fixed price above the Dip Floor Price to allow for price float and minimize false buy triggers. When the Stock Price is above the Buy Low Price and below the Buy High Price, both cells will be "Green" to signify it is a good time to consider making a purchase. You can enter either Low or High Price in your brokerage account as a limit order.
- 6. Buy High Price this is a fixed price above the Dip Floor Price to allow for price float above the Buy Low Price. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. When the Stock Price is above the Buy Low Price and below the Buy High Price. These cells will be "Green" to signify it is a good time to consider making a purchase. You can enter this cell value in your brokerage account for a limit order.
- 7. Trending Green (wks) This provides you with the number of weeks a particular stock has been between the Buy Price ranges. The float provided is a default for all stocks, but the float is increased for stocks that have a Spike Ratio of 2.0. This small Buy Now range could be jumped over because of the data being measured is once every 7-days. Yes, the cell could have N/A in it and not catch anything. This active trader tool is suggestive and is not intended to be an absolute tool. For this reason, you should consider entering the Buy High or Low Price as a Limit Orders in your Brokerage Account.
- 8. Spike Ratio this is an indicator of stocks with a hyperbolic gain that typically has an associate quick drop off. If you own a stock that grows to a Spike Ratio of 2, I suggest you sell near the high and take your quick gain. I would suggest that you not purchase the dip of a stock with a Spike Ratio of 2 because a repeat growth back to the previous high is not based on performance but popularity and speculation.
- 9. Dip Floor Price the price provided will be one of two prices. One is the lowest price in the range of measured prices. The second is a dip price below the 52-Week High. The second dip price is typically something that can't be measured or suggested by traditional trading tools.
- 10. Rebound Factor (RF) % this is exactly what you think it is. This is the ratio of maximum past (June of previous year) to present price divided by the measured range divided by the lowest past (December 31st of previous year) to present price which is called the RF. The RF is then converted to a percentage. This value is always positive.
- 11. Now Factor (NF) % This is the positive replacement for the 52-Week Change%. Who cares how much the price has dropped from the high price. This is the wrong thing to measure. This is the ratio of maximum past (June of previous year) to present price divided by the Now Stock Price which is called the NF. The NF is then converted to a percentage. The real thing to measure is the growing Exponential Rebound as the price drops further and further. If a stock has a 52-Week Change% of -50% or -75%, the corresponding Now Potential Rebound 100% or 300%, respectively. You say to yourself, WOW. The Now Potential Rebound of 100% or 300% would be a multiple of 2 or 4, respectively. If you invested \$32,000 and achieved a multiple of 2 or 4 your investment dollars would be \$64,000 or 128,000, respectively. The growth of the security has a 1 to 1 relationship with total investment made in a company.
- 12. Bounce Factor (BF) % the percentage provided can be "Zero" for two situations. One is when price is at the absolute lowest price for the price range. The second is when price sets lower or a new lower prices. The default calculated percentage when not "Zero" is the ratio of the Now Stock Price divided by Dip Floor Price which is called the BF. The BF is then converted to a percentage.

#### **Big Bank Boss Triple Point Reference Frame**

The discrete measurements of 52-Week High Change % and 52-Week Low Change % are at best an apples and oranges comparison and not entirely useful. For this exact reason, I created the Big Bank Boss Triple equations. The Big Bank Boss Triple equations output are positive numbers. The ratios can easily be converted to percentages. Now you have an apple-to-apple comparison with real-time growth potential. The output results define the now stock price in a triple reference box of the Rebound Factor (RF), Now Factor (NF) and Bounce Factor (BF).

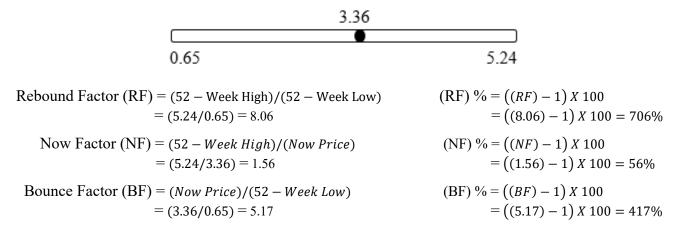

These formulas are very useful whenever the Stock Market goes thru a crisis or market correction. The Bounce Factor (BF) is identical to the 52-Week Low Change which represents the percentage above the Dip Floor Price. The Rebound Factor (RF) defines the maximum potential range for a stock based on past performance. The values of NF and BF in themselves do not provide a holistic picture. It is very important to add in the crucial component of trending upward or downward. If the trend of the price is downward the NF increases and the BF decreases.

There is no way to predict when future stock prices will trend upward, but I provide a weekly Big Bank Boss Newsletter that shows the weekly price trend charts with a "Yellow" cell to indicate a new low indicator and a "White" font cell to indicate a trending up from the Dip Floor Price.

**Big Bank Boss Triple Point Equations** 

These three equations are always positive and make it easy to convert to percentages. Also, a unique thing about these ratios is an equation can be formed to solve for one unknown. This equation can be the building block for a program to monitor stock price movement. The 52-Week Range for RIG is converted below.

The three Big Bank Boss Triple Point equations are linked in the single equation shown below. This equation only works for values are ratios, so you can't use this formula when the values are percentages.

$$NF = RF/BF$$

Substitution:

$$RF = 8.06$$
 and  $BF = 5.17$ 

How to interpret the bar chart and the tables to build a knowledgeable purchasing decision:

1. This trending bar chart informs the investor of the Top 7 highest ranking from left to right growth securities each week. The names will change for the first couple of weeks, but the names should stabilize. No picks should be made with this bar chart alone.

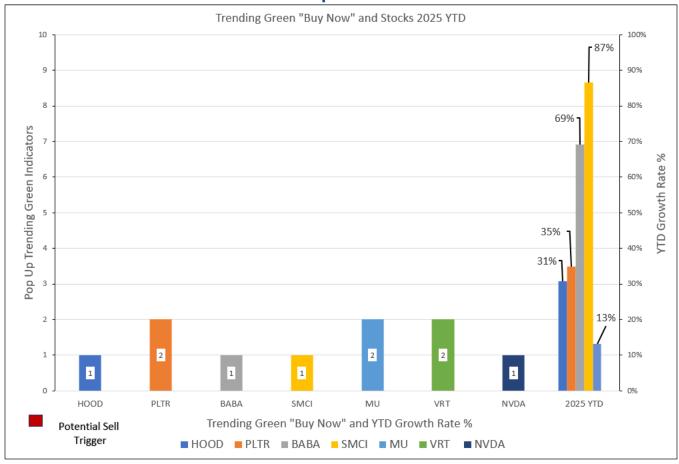

Table 1. Actual Bubble Up Stock Trends after 8 weeks

2. The below table provides the benchmark securities with the highest average growth rate over several years. These are the stocks you should consider as security picks from the trending bar chart. This below table shows you the volatility of growth rates from year to year. This is provided to help shape your expectations of future growth rates. All active investors have to live with the up and down growth rates from year to year, but the sum of it all is a positive cumulative growth rate.

Table 2. Potential Stock Picks for 2025 w/ Year-To-Date Performances from 2024 - 2019 Return

Symbols in italics are the Magnificent Eight Stocks

3. Now that you have a wholistic basis for your securities pick, you can now purchase your security when the trending now indicator is "Green". The trending "Green" indicator is active at growth rates up to ~ 30% Growth Rate YTD, so if you want to purchase a security later in the growth curve that is entirely up to you. This Bubble Up Trending "Green" table is entire driven by the stock market saying, "Buy Low and Sell High." All of the charts are provided to give the active investor real-time indicators to make stock market potential decision.

How to work the three data sets to build a knowledgeable purchasing decision:

1. This trending bar chart informs the investor of the Top 7 highest ranking from left to right growth securities each week. The names will change for the first couple of weeks, but the names should stabilize. No picks should be made with this bar chart alone.

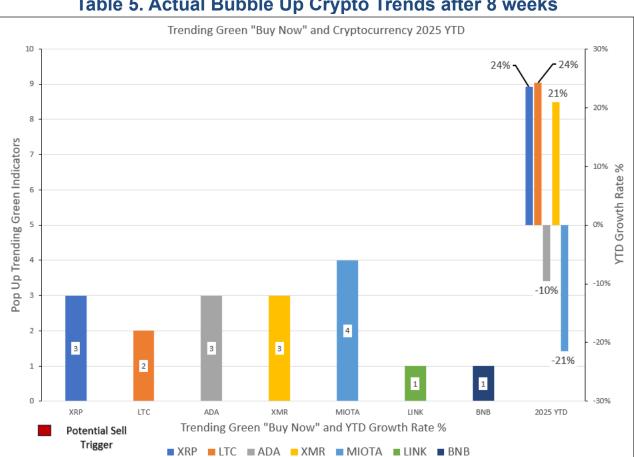

Table 5. Actual Bubble Up Crypto Trends after 8 weeks

2. The below table provides the benchmark securities with the highest average growth rate over several years. These are the stocks you should consider as security picks from the trending bar chart. This below table shows you the volatility of growth rates from year to year. This is provided to help shape your expectations of future growth rates. All active investors have to live with the up and down growth rates from year to year, but the sum of it all is a positive cumulative growth rate.

Table 6. Potential Crypto Picks for 2025 w/ Year-To-Date Performances from 2024 - 2020 Return

		GROWTH		GROWTH		GROWTH		GROWTH		GROWTH		7-YR	7-YR

3. Now that you have a wholistic basis for your securities pick, you can now purchase your security when the trending now indicator is "Green". The trending "Green" indicator is active at growth rates up to ~ 30% Growth Rate YTD, so if you want to purchase a security later in the growth curve that is entirely up to you. This Bubble Up Trending "Green" table is entire driven by the stock market saying, "Buy Low and Sell High." All of the charts are provided to give the active investor real-time indicators to make stock market potential decision.

How to work the three data sets to build a knowledgeable purchasing decision:

1. This trending bar chart informs the investor of the Top 7 highest ranking from left to right growth securities each week. The names will change for the first couple of weeks, but the names should stabilize. No picks should be made with this bar chart alone.

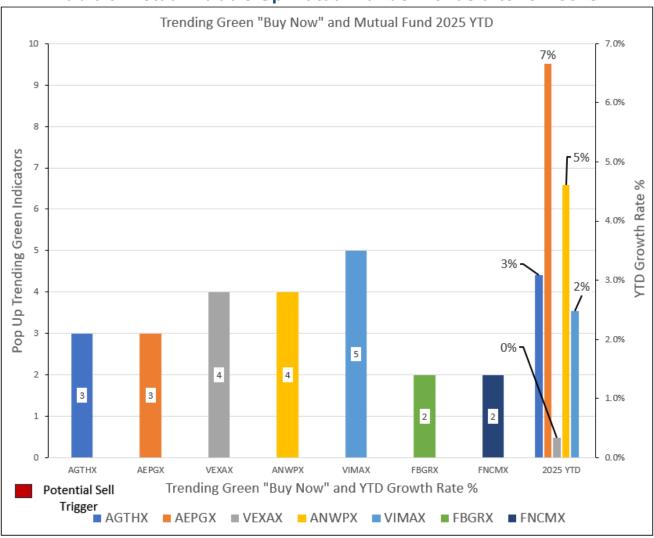

Table 9. Actual Bubble Up Mutual Funds Trends after 8 weeks

2. The below table provides the benchmark securities with the highest average growth rate over several years. These are the stocks you should consider as security picks from the trending bar chart. This below table shows you the volatility of growth rates from year to year. This is provided to help shape your expectations of future growth rates. All active investors have to live with the up and down growth rates from year to year, but the sum of it all is a positive cumulative growth rate.

Table 10. Potential Mutual Funds Picks for 2025 w/ Year-To-Date Performances from 2024 – 2019 Return

3. Now that you have a wholistic basis for your securities pick, you can now purchase your security when the trending now indicator is "Green". The trending "Green" indicator is active at growth rates up to ~ 30% Growth Rate YTD, so if you want to purchase a security later in the growth curve that is entirely up to you. This Bubble Up Trending "Green" table is entire driven by the stock market saying, "Buy Low and Sell High." All of the charts are provided to give the active investor real-time indicators to make stock market potential decision.

The explanation provided in the previous section was redundant on purpose. Active traders may have preference of one security over another, so I provide the same introduction for all of the securities. The legion and the layout of the table are the same to make it easier for the reader.

#### Cramer's week ahead: Earnings from Nvidia, Dell and Home Depot

Julie Colman wrote this article for CNBC on Friday, February 21, 2025.

CNBC's Jim Cramer on Friday walked investors through next week on Wall Street and highlighted earnings reports from Home Depot as well as tech giants Nvidia and Dell. He also discussed the market's decline over the past few sessions — especially the poor performance of formerly-hot growth stocks — predicting investors haven't seen the end of the downturn.

"Out of nowhere, the momentum stocks had a hideous downturn today. It's hurt many aggressive growth investors," he said. "Can this pullback finally run its course? I hope so. If not, my prediction? More of the house of pain."

On Monday, Cramer will be following reports from Domino's Pizza, Coterra, Realty Income, Cleveland-Cliffs as well as Hims & Hers. The pizza giant's results could give investors insight into the state of the consumer, he suggested. Cramer said he feels generally good about the oil and gas group, including Coterra. He also said Realty Income is one of his favorite real estate investment trusts, but added that he's worried about Cleveland-Cliffs which may face difficulties due to cheap steel exports from abroad. He called online healthcare provider Hims & Hers a "true battleground," as investors wonder if the company can continue to offer less expensive GLP-1 weight loss drugs with compounded ingredients now that the Food and Drug Administration has deemed the shortage of the semaglutide injection products over.

Home Depot is set to report Tuesday, and while Cramer said he expects a weaker quarter from the retailer, it should benefit from the need to rebuild after major storms in the southeast and fires in Los Angeles. He'll also be watching earnings on Tuesday from Planet Fitness and Sempra, saying the gym chain may benefit from increased focus on fitness from younger generations. Cramer noted the utility company has a decent yield, a lot of opportunity and could be worthy buying on weakness. Workday and Cava will also report that day. According to Cramer, Workday will see more downside if sales are weak, and even though he largely expects a solid quarter from Cava, he said the market in general has soured on momentum stocks.

Wednesday brings earnings from Lowe's, and Cramer said the Home Depot competitor has been "a stand-out performer for years," going higher over time instead of shooting up. Tech leaders Salesforce, Snowflake and Nvidia will also report Wednesday. Salesforce is thought to be doing well, Cramer said, but has been hit with sellers because it is seen as a momentum stock. He also suggested that Snowflake is not just a cloud company, but an advisor to the enterprise about how use artificial intelligence. According to Cramer, Nvidia's report is the most important one of the week. He reiterated that he believes investors should own, not trade, the stock, expressing confidence in CEO Jensen Huang even as some investors routinely question the worth of new iterations of the company's chips. But he noted that Friday's decline in semiconductors doesn't bode well for the Al darling.

Read the entire article at CNBC: <a href="https://www.cnbc.com/2025/02/21/cramers-week-ahead-earnings-from-nvidia-dell-and-home-depot.html">https://www.cnbc.com/2025/02/21/cramers-week-ahead-earnings-from-nvidia-dell-and-home-depot.html</a>

#### Overall comments for the week Return

The count for trending "Green" for the securities were stocks (10 out of 63), cryptocurrencies (0 out of 14), and mutual funds (4 out of 20).

The Weekly Winners were Supermicro – Hardware (SMCI), Alibaba – Internet Retail (BABA), Moderna – COVID-19 (MRNA), Nike – Apparel, Accessories, and Luxury Goods (NKE), and Lam Research – Semiconductor Materials (LRCX) with gains of 17%, 15%, 8%, 5%, and 4%, respectively.

The Weekly Losers were Axon Enterprise – Aerospace and Defense (AXON), Fiverr – Internet Retail (FVRR), Robinhood – Crypto Exchange (HOOD), Block – Payment Processing (XYZ), and Palantir – Internet Services, Defense (PLTR) with losses of -25%, -23%, -21%, -19%, and -15%, respectively.

I continue to recommend that you do not purchase stocks within days before the quarterly report is posted. It is best to let the market absorb the news good or bad news. If the price drops, you get to purchase the stock at a discount instead of getting hit with an instant -20% loss or greater that will take weeks or months or a year to get back to even.
